For autism, apraxia,  
Down Syndrome,  
or any speech disorder

For more information, visit  
[www.TapToTalk.com](http://www.TapToTalk.com)

## TapToTalk for Nintendo

TapToTalk turns a Nintendo DS, DSi, DSi XL or DS Lite into an augmentative and alternative communication (AAC) device.

Children love to use TapToTalk on a Nintendo because it is cool and they don't stand out. Parents love it because it is ultra-portable, sturdy and economical. And your child can use it to communicate anytime, anywhere.

## TapToTalk for the iPhone® and iPad™

TapToTalk turns an iPhone, iPad or iPod touch® into an augmentative and alternative communication (AAC) device.

The iPhone, iPad and iPod touch are devices that every child wants. The TapToTalk App is great for schools and agencies that have already invested in these products. And it downloads your latest TapToTalk changes automatically every time you start it, through your WiFi or cellular network. Download the TapToTalk App from the App Store<sup>SM</sup>.

## TapToTalk for the Web

TapToTalk turns your computer into an augmentative and alternative communication (AAC) device.

Whether it's a PC, a Mac, a Netbook or a Tablet, your child can use TapToTalk. Schools and parents love TapToTalk Web to teach children using a mouse or a touchscreen. Anywhere there's a computer and a web connection, you and your child can use TapToTalk.

You get all three for one low price,  
only \$99.95 a year

## Customizable

You customize what your child sees and hears in TapToTalk on a web site called TapToTalk Designer. With it, you build "albums" that fit your child's needs. For example, an album can be for home, school or even one just devoted to his favorite foods. TapToTalk Designer has a that you use to organize your albums. You can and record your voice, too!

Because TapToTalk Designer is on the web, you can use it with a Mac or PC. You can use it anywhere you have an Internet connection. And all your albums, pictures and sounds are always there. If something should happen to your TapToTalk, you don't have to start all over. You'll never lose your work.

## Affordable

You can get started with TapToTalk for \$99.95! That's about a quarter a day!

TapToTalk is comparable to other assistive communications devices that cost hundreds and thousands of dollars. In fact, it is less expensive than the service contract on some of these devices. And we send you everything you need, except the Nintendo DS, iPhone, iPad or iPod touch itself.

## Socially Acceptable

Kids love that when they use a Nintendo, iPhone, iPad or iPod touch, they don't stand out or look different. Each of these devices is cool and your child will want to use it. In fact, she'll be proud of it.

This becomes especially important as a child approaches adolescence, when "fitting in" becomes more important than ever. You can even create an album for when your child is just hanging out with friends, with pictures and sounds that fit his social needs.

## Portable

TapToTalk gives you an array of widely available portable and lightweight devices to choose from to meet your child's needs. No matter which you choose, your child will be able to carry it in their backpack or, in some cases, their pocket. Best of all, you can use one or all, because you get free TapToTalk Apps for all our platforms with your subscription.

The Nintendo DS family (DS, DS-Lite, DSi and DSi XL) all feature a clamshell design and dual screens. These devices are designed to stand up to the kind of dropping and pounding that all kids give their toys. There are many cases, screen covers, lanyards and other add-ons available for the Nintendo. And, yes, you can still play games on it.

The iPhone, iPod touch and iPad are the ultimate in styling and portability. Kids love them. And if you're an iPhone user, you can always have your child's albums with you, too, in case they forget their Nintendo or iPod touch.

The TapToTalk Web App is perfect for Netbooks, Tablet PCs, touchscreens or any internet-connected computer. You or your child can get to his or her TapToTalk albums anywhere, from school, the library, grandma's house or an Internet café. Wherever there's a web browser and Internet connection, you and your child can use their TapToTalk.
